

Clamping jaw 100 mm steel nickel-plated for 9-290 (PAIR)

Art.-No.**9-900-0773-1****Description**

Clamping jaw 100 mm steel nickel-plated for 9-290 (PAIR)

Features

usable on both side (turnable)
smooth surface for scratch-sensitive parts and surfaces
grooves for pipe clamping and round solid material
with stepped edge for square material or thick sheets
jaw width 100 mm
more protective jaws search field input 9-900
Nickel-plated steel
Dimensions 100 × 30 × 6 mm
weight 83 g

**Application and technical data**

The clamping jaws for tight screwing fits perfectly and can be used on both sides (turning option). The smooth surface protects sensitive surfaces. The other side solves difficult clamping problems with longitudinal and transverse grooves. This means that round objects such as pipes or solid rods can also be securely clamped.
