

An earth facility (EF) usually distributes the electrical mains earth or a dedicated ESD earth, (protective earth) within an EPA.

In an EPA there may be several EBP but there must be only one EF.

"In the event that a ground facility is not available, ESD protection can be achieved by connecting all of the ESD control items together at a common connection point (see Figure 2). The maximum resistance between any protective item and the common connection point shall comply with the limits established for the protective items as per Tables 2 and 3." [EN 61340-5-1 clause 5.3.2 Grounding/equipotential bonding systems]

Made in the
United Kingdom

Unless otherwise noted, tolerance $\pm 10\%$
