The Solution in the Large Current Era

Outstanding Performance in Heavy-Duty Soldering

There is an increasing demand for larger current applications in industries such as automotive devices, industrial equipment, etc.

The larger current requires thicker copper foil of P.W.B., more layers of P.W.B. and bigger harnesses.

And because of that, the demand for soldering iron with higher thermal capacity and operability is increasing.

« A Wide Range of Tip Shapes

« 300 W Soldering Tips Are Compatible with FX-805

FX-805 accepts not only the new T37 series (400 W) soldering tips but also the conventional T33 series (300 W).

For more details, please visit our website. https://www.hakko.com/red_22017

« Improving Solderability by the Heated N₂ Gas Option

Changing the handpiece to FX-8005 enables N₂ soldering. Heated N₂ gas discharged from the tip end helps solve insufficient heating, improve solder wetting and reduce thermal load to heat-sensitive components.

FX-805

Packing List

Tip not included

Specifications

Model No.	FX-805
Power consumption	460 W
Temperature range	50 to 500°C
Temperature stability	At idle temperature ±5°C
■ Station	
Output	AC 30 V
Dimensions	143 (W) x 107 (H) x 218 (D) mm
Weight	3.9 kg
■ Handpiece	
Power consumption	390 W (30 V)
Tip to ground resistance	<2 Ω
Leak voltage	<2 mV
Heating element	Composite heater
Cord length	1.2 m
Total length	244 mm (with T37-D24 tip)
Weight	54 g (with T37-D24 tip)

*Total length and weight are measured without cord.

Option

N₂ Soldering Iron
Model No. FX-8005

SOLDERING STATION

The Fusion of
Ultra Power & Operability
unleashes **Heavy-Duty Soldering**

CA00567EaYa002 2025.04

The Fusion of Ultra Power & Operability Unleashes Heavy-Duty Soldering

The Smallest, Lightest and Best Heavy-Duty Soldering Station

HAKKO developed FX-805 to meet the demand from the fields for more powerful but more comfortable soldering stations. 400 W Ultra Power and comfortable operation by compact design provide tremendous performance.

Ultra Power FX-805 That Melts even a Solder Bar Quickly

FX-805 with 400 W composite heater, the highest wattage in HAKKO composite tips, achieves rapid heating. It is best suited for soldering transformers or coils on power-supply boards or shield cases on communication devices.

Ultra Power
400 W

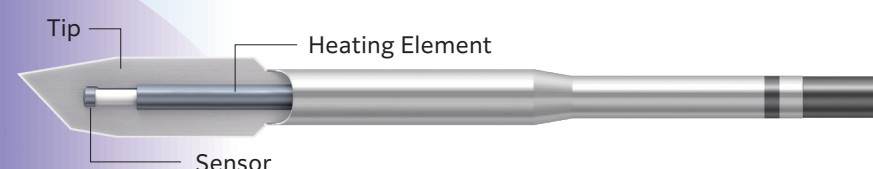

Comfortable Operation

For More Comfort for Less Stress

The 10%* thinner cord makes the operation more smooth and comfortable.
*Comparison with the handpiece of FX-801 (300 W soldering station)

« The New Composite Tip

The newly developed composite tip achieves 400 W Ultra Power. Its high thermal capacity improves soldering productivity to 120%* of the conventional model.

1. Improved Sensor Sensitivity

The improved sensor is set close to the tip end and measures a more accurate temperature at the soldering point.

2. The New Tip Design for Smoother Heat Transfer

The volume of the heater body is 113%* of the conventional model without a change in diameter and improves thermal conductivity.

*Comparison with FX-801 (300 W soldering station)

« Safe Tip Replacement

The new design iron holder with the tip removing attachment makes tip replacement safe and easy.

The New Design Iron Holder

Removing a tip with the right groove of the attachment

Safe tip insertion by using the tip insertion holder

« Traceability in Manual Soldering

The dedicated software* automatically records set temperature, calibration /offset, and tip sensor temperature in soldering. It prevents human error in such recording.

*PC is required and must be connected with the station.

Digital Management

The recorded data are available for search and browse.

« Human Error-Free Operation

Using the thermometer (FG-100B/FG-101B) along with FX-805 enables automatic calibration/offset function. It helps prevent human error by eliminating the manual recording process.

The Solution in the Large Current Era

Compact Design

The Smallest and Lightest Heavy-Duty Soldering Model in the Industry

The Handpiece Weights Approx. 50 g

Despite its 400 W power, the handpiece is the lightest in the industry for comfortable operation.

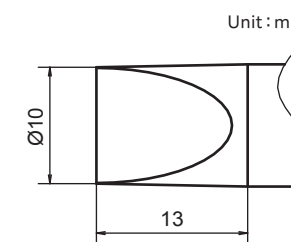

Please experience the outstanding performance.

« PICK UP New Additional Tip Shapes

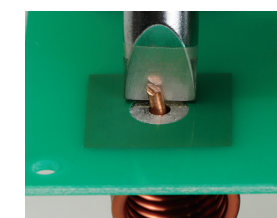

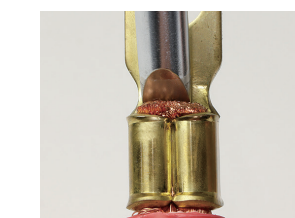

For Large Components

10 mm wide tip

T37 series has a 10 mm wide tip in the lineup, which maximizes the performance of 400 W power. This tip is recommended for soldering large components with high thermal mass and thick wire harnesses.

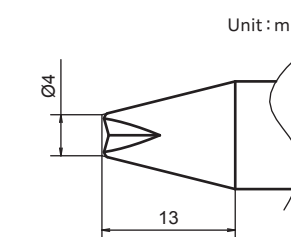

Part number: T37-D10

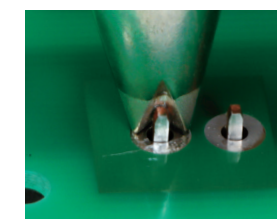

For Through-Hole Fill

Tip with V-groove

The V-groove on the tip increases the contact area with land and component lead. As a result, it effectively transfers heat and improves through-hole fill, soldering quality, and productivity.

Part number: T37-BCR4
