

Hand Roller for Hot Air Station - Hakko A1115

Item no. HK-A1115

Manufacturer Hakko

EAN 4962615001598

Kein Produktbild

Hand roller attachment designed for use with the Hakko FV-310 hot air station. Enables precise manual control and positioning during soldering and rework operations on PCBs and electronic components.

TECHNICAL DATA

Country of Manufacture	Japan
HS-Code	85159080
Weight	0.1 kg

DESCRIPTION

OVERVIEW

The Hakko A1115 is a hand roller attachment specifically engineered for the Hakko FV-310 hot air station. This accessory provides operators with enhanced control and precision when performing manual rework, component placement, and soldering tasks on printed circuit boards and delicate electronic assemblies.

KEY FEATURES

- Designed exclusively for Hakko FV-310 hot air station compatibility
- Enables precise manual control during rework operations
- Ergonomic hand-operated design for operator comfort
- Facilitates accurate component positioning and alignment
- Supports controlled heat application to target areas
- Durable construction for reliable performance in production environments

APPLICATIONS

Ideal for PCB rework, component replacement, solder reflow operations, and precision soldering tasks requiring manual control and positioning. Commonly used in electronics repair, prototype development, and small-batch manufacturing environments.

SCOPE OF DELIVERY

- Hakko A1115 hand roller attachment
