

Quick connect coupling Multi Cupla MAM-A-3P, brass - Nitto Kohki 349824848

Item no. NKH-349824848

Manufacturer Nitto Kohki

The plug is the insert half of the connection and enters the socket of the same size. It is normally fitted to the side that moves, gets swapped or travels with the job, such as a hose, a tool or a test piece. Plugs in this series are available in brass, steel and stainless steel with NBR or FKM seals. Model MAM-A-3P, brass, Seal material FKM.

TECHNICAL DATA

Weight	0.05 kg
Werkstoff	Messing

DESCRIPTION

On machines and test rigs, lines are disconnected and reconnected several times a day. The Multi Cupla series from Nitto Kohki covers that job with 120 versions in brass, steel or stainless steel, each available as a socket and as the matching plug.

- Bodies in brass, steel or stainless steel (SUS), so the coupling suits the environment at the installation point.
- Seals in NBR or FKM, which lets the material pairing be matched to the medium being carried.
- Every socket has a plug of the same size, for example MALC-4S and MALC-4P, which keeps spare part stocking simple.
- Sizes 01, 1, 2, 3, 4, 6 and 8 within the same model line, so different port sizes stay inside one coupling system.
- 120 articles in a single series, from the individual coupling to the MAM, MALC, MALS, MALT, MAS and MAT versions.

TECHNICAL DATA

Model	MAM-A-3P
Coupling part	plug
Body material	brass
Seal material	FKM

APPLICATIONS

- Tool and fixture changes where lines are disconnected on a regular basis
- Test and measuring benches with changing setups
- Plant modules that are uncoupled quickly for service and rebuilds
- Installation points in corrosive surroundings, which is what the stainless steel (SUS) versions are intended for
