

Lötspitze meißelförmig, dicke Eisenschicht für Serienlötung, C245-Serie - JBC C245735E

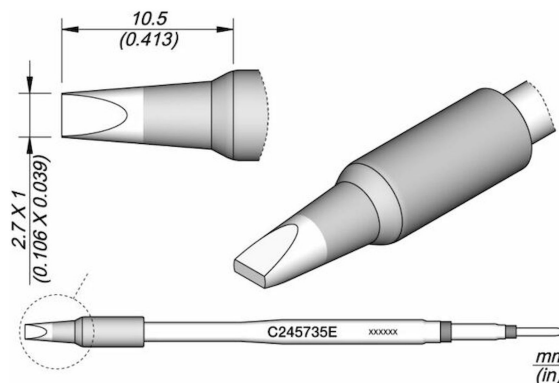

Item no. WL87114

Manufacturer JBC

Chisel-shaped JBC C245 series soldering tip with a thicker iron coating for hard, repetitive soldering in mass production. Fits all T245 handpieces and lasts up to five times longer thanks to the Sleep and Hibernation functions.

TECHNICAL DATA

Country of Manufacture	Spain
HS-Code	85159080900
Serie	C245
Weight	0.1 kg

DESCRIPTION

Anyone setting the same joints all day long in mass production needs a tip that does not wear out quickly. The JBC C245735E is a chisel-shaped C245 series cartridge with a deliberately thicker iron coating, designed for hard and demanding soldering work in volume production.

BENEFITS

- Reinforced iron coating for long service life during repetitive soldering in series production.
- Suitable for general soldering as well as SMD components and high heat demand tasks such as soldering ground planes.
- Up to five times longer service life than other brands thanks to the JBC Most Efficient Soldering System and the Sleep and Hibernation functions.
- Instant heat-up and fast tip temperature recovery through the heater integrated in the cartridge.

TECHNICAL DATA

Article number	C245735E
Tip series	C245
Tip shape	chisel
Version	reinforced iron coating (E)
Compatible handpiece	T245

APPLICATIONS

Series and repair soldering of through-hole and SMD components, soldering on ground planes and base plates, and all tasks with increased heat demand.

COMPATIBILITY AND SCOPE OF DELIVERY

Compatible with all JBC T245 handpieces. Supplied as a single cartridge (1 piece).

Note: the thicker iron coating increases service life but slightly reduces thermal efficiency.
