

Free-standing circuit board holder for PCT-100 preheater - Oki BH-100

Item no. WL24505

Manufacturer Oki

An assembly that shifts during preheating costs time and puts pads and components at risk. The Oki BH-100 holds the board in position above the heating surface of the PCT-100 without clamping it. As a separate unit it can be aligned freely to the preheater and used for other steps as well.

TECHNICAL DATA

Weight

0.1 kg

DESCRIPTION

During preheating and the rework that follows, the board has to sit flat and stable above the heating surface. The Oki BH-100 free-standing board holder takes the assembly and can be positioned freely relative to the PCT-100 preheater instead of being fixed to it.

BENEFITS

- Genuine Oki accessory, recommended for use with the PCT-100 preheater
- Free-standing design, positioned independently of the preheater
- Holds the circuit board securely in place during preheating
- Also usable for soldering, inspection and assembly work away from preheating
- Complements the integrated BH-010 holder when board sizes vary

TECHNICAL DATA

Item number	WL24505
Model	BH-100
Manufacturer	OKI
Manufacturer item number	BH-100
Product type	Free-standing board holder
Recommended for	PCT-100 preheater

APPLICATIONS

Holding circuit boards during preheating and manual SMT or through-hole rework. Equally suited to visual inspection, touch-up and assembly work at the electronics bench.

COMPATIBILITY AND SCOPE OF DELIVERY

Recommended for the Oki PCT-100 preheater, but as a separate unit it does not depend on it. Scope of delivery: one BH-100 board holder, sales unit piece.
