

Adjustable tool holder full configuration without base plate - Oki ATH-1000A

Item no. WL26062

Manufacturer Oki

A rework bench with several hand pieces needs more than a single iron rest. The Oki ATH-1000A is an adjustable tool holder in its maximum configuration and takes up several hand pieces and accessories at once. This version ships without a base plate and is added to an existing base or mount.

TECHNICAL DATA

Weight	0.1 kg
--------	---------------

DESCRIPTION

A rework position rarely holds just one hand piece. The ATH-1000A adjustable tool holder from Oki keeps several tools and accessories in a defined position, so hot tips never rest on the bench surface and the operator reaches for each tool in the same place every time. This version is the maximum configuration and is supplied without a base plate.

BENEFITS

- Maximum configuration with seats for several hand pieces and accessories in one place
- Fixed parking position for hot soldering tips and hot air pencils
- Supplied without base plate, so it completes an existing base
- Adjustable seats for different hand piece sizes
- Compact build that keeps the usable bench area free

TECHNICAL DATA

Item number	WL26062
Model	ATH-1000A
Manufacturer	Oki
Manufacturer item number	ATH-1000A
Version	Maximum configuration, without base plate

APPLICATIONS

Electronics manufacturing, rework and repair benches, laboratory and prototype work. Useful wherever several hand pieces are used in turn and every tool needs an unambiguous parking place.

COMPATIBILITY AND SCOPE OF DELIVERY

Designed for hand pieces and accessories of the Oki rework and soldering systems. Scope of delivery is the adjustable tool holder in maximum configuration without base plate. Hand pieces, cartridges and the base plate are not included and are ordered separately.
