

Prefilter for extraction unit T15, pack of 5 - Donaldson Bofa A1030095

Item no. WL34476

Manufacturer Donaldson Bofa

Inside the T15 the air drawn from up to 15 soldering benches hits the prefilter first, which is why it loads quickly. The A1030095 is the original prefilter for this high-vacuum unit and keeps coarse flux dust away from the HEPA stage. The pack of 5 covers several maintenance intervals in continuous operation.

TECHNICAL DATA

Weight 0.1 kg

DESCRIPTION

The Bofa T15 filters in three stages, and the first stage carries the full dust load from up to 15 extraction points. Prefilter A1030095 is exactly that wear element and protects the downstream HEPA stage from early saturation.

BENEFITS

- Original Donaldson Bofa prefilter for the T 15 extraction unit
- First filter stage ahead of the HEPA stage, extending main filter service life
- Pack of 5 for several maintenance intervals in multi-shift operation
- Tool-free replacement, the bench is out of service only briefly
- Maintains the recommended flow rate of 22 l/min per soldering tip

TECHNICAL DATA

Item number	WL34476
Model	A1030095
Manufacturer	Donaldson Bofa
Manufacturer item number	A1030095
Order unit	Pack
Content	5 pieces

Device series	T 15
Filter type	Prefilter
Weight	0.1 kg

APPLICATIONS

Routine maintenance of the central T15 solder fume extraction system in electronics manufacturing, rework and repair centres and laboratories. Replace when the filter discolours visibly or airflow at the extraction points drops.

COMPATIBILITY AND SCOPE OF DELIVERY

Suitable for the Bofa T15 high-vacuum extraction unit, manufacturer item number 30766581-1454. Delivery comprises one pack of 5 prefilters A1030095.
