

Combination filter cassette complete with H14 particle filter for MDF filter shaft - ULT 02.1.524

Item no. WL46132

Manufacturer ULT

Once the filter cassette is saturated, the separation performance of the extraction unit drops noticeably. This complete combination filter cassette for the MDF filter shaft replaces every stage in one go: panel filter, fine dust mat, H14 particle filter and adsorption filter. Coarse particles, fine dust as well as gases and odours are retained again in a single pass.

TECHNICAL DATA

Norm EN 1822

Weight 0.1 kg

STANDARDS & COMPLIANCE

DIN EN 1822

DESCRIPTION

For filter changes on ULT extraction units with an MDF filter shaft. The combination filter cassette is supplied fully assembled and covers the whole filter train from pre-separation through to gas adsorption, so separation performance returns to the design level after the change and the change itself stays low in contamination.

BENEFITS

- All filter stages in one cassette, no need to match individual components
- H14 particle filter for ultrafine dust and respirable aerosols
- Adsorption filter for gases and odours in the same assembly
- Panel filter and fine dust mat as pre-stages extend the service life of the costly final stages
- Exact fit for the MDF filter shaft, tool-free change on the unit

TECHNICAL DATA

Item number WL46132

Kein Produktbild

Model	02.1.524
Manufacturer	ULT
Manufacturer item number	02.1.524
Order unit	piece
Design	combination filter cassette, complete
Filter shaft	MDF
Filter stage 1	panel filter
Filter stage 2	fine dust filter mat
Filter stage 3	particle filter H14
Filter stage 4	HEPA adsorption filter

APPLICATIONS

Replacement filter for scheduled servicing of extraction and filtration units that clean solder fumes, process vapours or odours in recirculation mode. A change is due as soon as the filter loading indicator reports 100 percent or the required volume flow is no longer reached.

COMPATIBILITY AND SCOPE OF DELIVERY

Supplied as a complete cassette consisting of panel filter, fine dust filter mat, H14 particle filter and adsorption filter. It is intended for ULT units with an MDF filter shaft. Check the shaft designation on the rating plate of the unit before ordering.

Filter class H14 is defined in DIN EN 1822.
